

## PAYLOAD ANALYSIS

QXtend

1/16/2017

Regoti, Sujata

QXtend

1. From payload get end point

```
<qcom:propertyName>EndpointURK</qcom:propertyName>  
<qcom:propertyValue>  
http://heuqa.tcc.etn.com:8081/heu1qxi163/services/QdocWebService</qcom:pr
```

In the above endpoint URI, nhaqxi163 represents nha QXtend Inbound. For outbound : nhaqxo163

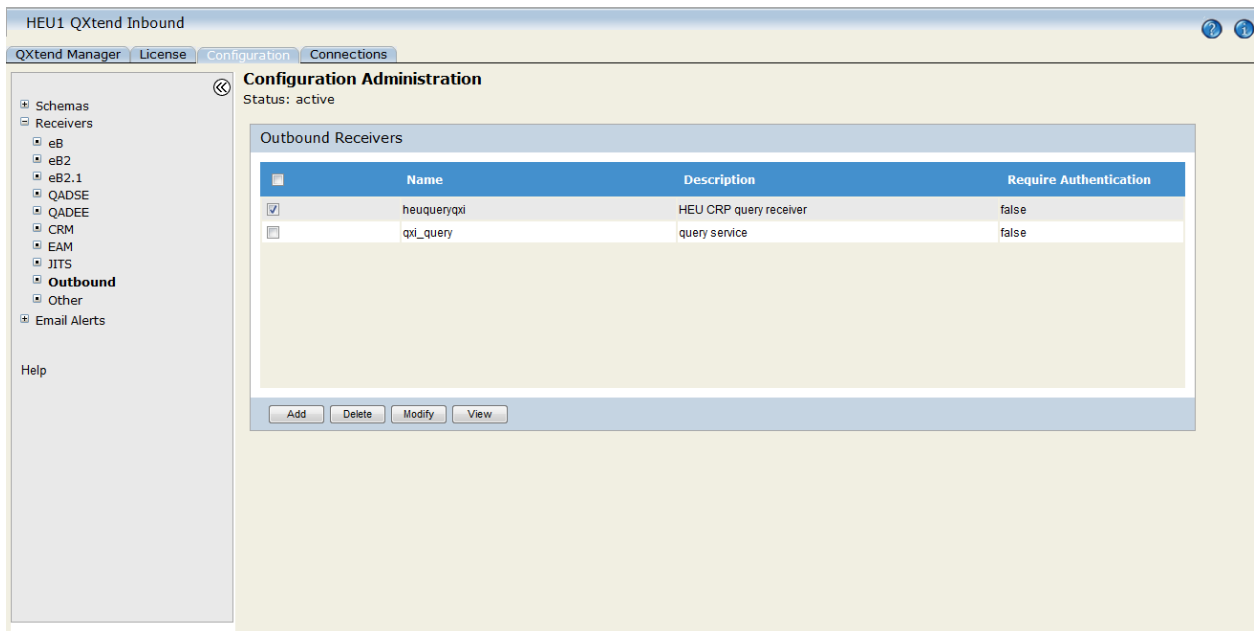

Use Link : <http://heuqa.tcc.etn.com:8081/heu1qxi163>

2. Get wsaTo Property

```
<ns2:propertyName>wsaTo</ns2:propertyName>  
<ns2:propertyValue>urn:services-qad-  
com:heuqueryqxi</ns2:propertyValue>
```

Here outbound receiver heuqueryqxi.

3. Open above URI. Go to Configuration->Receivers->Outbound

Under receivers find above receiver name.

We can check whether receiver specified in payload is available in Outbound Receiver list or not.

4. If found, Click on View.

```
<part name="body">
```

```
<querySoaltemHyd> → Receiver QDocName
```

HE01 Qxtend Inbound

<input checked="" type="checkbox"/>	querySoaltemHyd	Qdoc 1.1	eB_1	SI API Adapter	com/qad/qxtend/si/Q	
<input type="checkbox"/>	querySoaltemps	Qdoc 1.1	eB_1	SI API Adapter	com/qad/qxtend/si/Q	
<input type="checkbox"/>	querySoaltemsite	Qdoc 1.1	eB_1	SI API Adapter	com/qad/qxtend/si/Q	

Check Version as specified in payload.

<ns2:propertyName>version</ns2:propertyName>

<ns2:propertyValue>eB\_1</ns2:propertyValue>

5. In outbound, Under Business Object find response provided in payload.
